

**North Carolina Institute of Medicine
Healthy NC 2020: Injury Subcommittee Meeting
Friday, February 5, 2010**

Subcommittee Members Present: Tom Bridges, Chris Bryant, Laura Edwards, Marsha Ford, Linda Hughes, Scott Proescholdbell, Kelly Ransdell, Sharon Rhyne, Carol Runyan

NCIOM Staff and Interns: Mark Holmes, Catherine Liao

Methodology for Setting Objectives and Targets

In developing objectives and targets for each focus area, subcommittees should work to propose three objectives and select one objective that can be considered a "summary indicator" for their particular focus area; propose scientifically-derived targets that can be aspirational but realistic and measurable in 10 years; and consider objectives that are available at the county-level and for race/ethnicity, gender, and age.

Draft Injury Objectives

The Injury Subcommittee proposed the following draft objectives:

1. Unintentional mortality
2. Intentional mortality
3. Unintentional morbidity

Next Steps

The NCIOM is working with the Division of Public Health to compile data for injury-related measures, including motor vehicle accidents, poisonings, falls, and violent death. At the second meeting, subcommittee members will further discuss the proposed objectives, select the final three objectives including the summary indicator, and begin to set targets.
